**PERMANENT HAIR REMOVAL
& SKIN REJUVENATION**

PERMANENT HAIR REMOVAL

The Good News

No more waxing, plucking, epilating, depilating, threading or electrolysis - only smooth confidence! Laser hair removal is a revolutionary technology that effectively reduces unwanted hair permanently and with minimal discomfort. It is suitable for all skin types but it's not effective on blonde, white or light red hair..

How It Works

Light is emitted across a specific wavelength and is absorbed by the melanin in the targeted hairs, which permanently destroys the follicles. Owing to the cyclical nature of hair growth, usually 6 to 8 sessions are required spaced weeks apart in order to treat the hair during its growth phase (anagen).

What You Will Feel

Laser treatments are non-invasive and can be administered during a lunch hour with colleagues and friends being none the wiser. You will experience a heat sensation no more painful than waxing. After a few weeks the body pushes the dead roots out of the skin. The results are permanent but hormonal changes may affect future hair growth i.e. menopause, giving birth or medicated conditions e.g. diabetes and thyroid dysfunction.

How To Prepare For Treatment

The roots must be intact for the treatment to work so no waxing or epilating before or during a course of treatments. The area must be shaved a day or two before your session. You cannot have treatment if you have a deep natural tan or fake tan because this can cause the skin to blister.

SKIN REJUVENATION

Photo Facial Rejuvenation

This treatment produces a fresher, brighter and plumper complexion. Collagen production is stimulated; pigmentation and thread veins are improved; and fine lines are softened. This creates a more even skin tone and finer overall texture. 4 treatments are advised, spaced 6 – 8 weeks apart.

Pigmentation

Melanin is lifted to the surface of the skin and forms a dark micro crust over 10 days following the treatment, which exfoliates off revealing a more even skin tone. Up to three treatments may be required, spaced 4 weeks apart.

Acne

Light is absorbed by haemoglobin in the lesions, which kills the acne bacteria. Significant improvement is seen after 4 – 6 treatments spaced 2 weeks apart.

Thread Veins

Light is absorbed by haemoglobin and causes photocoagulation of the vessel, which is gradually drained away via the lymphatic system over a few weeks following treatment. This treatment is suitable for the face, chest and upper back. 4 treatments may be required, spaced 4 weeks apart.

Who Is Suitable For Treatment?

Only pale, olive or deeper Mediterranean skin types are suitable for rejuvenation treatments.

PRICE LIST

Consultation	Free	Face & Neck	110
Test Patch	Free	Feet & Toes	30
Arms (half)	75	Forehead	60
Arms (full)	110	Hands & Fingers	60
Back (half)	90	Jaw Line	40
Back (full)	160	Legs (half - thighs)	150
Beard	85	Legs (half - lower)	130
Bikini Line	65	Legs (full)	250
Bikini Brazilian	80	Lip Upper	35
