

VASCULAR LESIONS

red thread veins + cherry nevae

A specific wavelength of light is used to treat these lesions. The red blood cells absorb the light and it turns to heat energy causing photocoagulation, which seals the vessels. Good improvement is seen directly after the treatment but the body continues to clear residue from the treated site over time and the full effect is seen after a few weeks.

Immediately after the treatment the skin is usually flushed and reddened and feels a little stinging or tingly. There is no lingering pain or damage to the skin's surface because the treatment is done with pure light and the skin is not pierced in any way. You can return to work or apply make-up if necessary. The redness usually subsides within 24 hours. It's advised to apply aloe vera gel after the treatment and to cleanse gently, avoiding scrubs or alcohol cleansers for a week or so.

Red, brown or black lesions can be treated with lasers. It works particularly well on the face, upper back and decollotage, with the exception of red cherry nevae that are effectively treated anywhere. A few treatments may be necessary, spaced 4 weeks apart.

Price: up to 15 mins - £50
30 mins - £95

45 mins - £135
60 mins - £170

REJUVENATION

face + decolletage + hands

The skin is treated with a combination of IPL and laser technology to improve pigmentation marks, veins and general redness. It significantly refines skin tone and texture and boosts collagen production. Initially, a few treatments may be necessary spaced 4 weeks apart and then an annual maintenance treatment is recommended.

Price:
Face & neck - £160
Decolletage - £180
Hands - £100
